

# PRO GOLD TROMMEL

Patent No. D631, 900

Featured in the Sept/Oct 2014 issue of **GOLD PROSPECTORS** magazine!

## → 10" HD SPECIFICATIONS: **\$3,200.00**

1.5 yards / 1.5 tons / 30-40 five gallon buckets / hr  
210 lbs. / L. 64"- Ht. 40"- W. 30" (wheel base)  
Rotating drum: 10" dia., L. 32"  
Sluice box: L. 34"- Ht. 4 ½"- W. 12"

## → 14" SPECIFICATIONS: **\$4,200.00**

2 yards / 2 tons / 40-50 five gallon buckets / hr  
265 lbs. / L. 72"- Ht. 44"- W. 30" (wheel base)  
Rotating drum: 14" dia., L. 47"  
Sluice box: L. 48"- Ht. 4 ½"- W. 14"

Appropriate size  
Inline Screen included

**Now Powder coated!**

Features	Heavy Duty (HD) 10" Pro Gold Trommel	14" Pro Gold Trommel
Material processed / hour*	1.25 - 1.5 tons*	1.5 – 2 Tons*
Barrel load capacity	50 lbs	60 lbs
Transmission	3 speed, belt to chain	3 speed, belt to chain
Tires	Larger, heavier tread	Larger, heavier tread
Wheel base	30" Wide	30" Wide
Tow Hitch	✓	✓
<b>For larger-scale &amp; International operations</b>	✓	✓
Price ~MSRP~	<b>\$3,200.00</b>	<b>\$4,200.00</b>

\*Material processed / hour depended on the type of material run. (ie. sands must be run at a slower rate)

OUR MISSION: To make the gold prospecting experience more productive for small scale miners.

# PRO GOLD TROMMEL

Patent No. D631, 900

## PRODUCT DESCRIPTION:

- Durable, built to take a beating. Literally. Throw, dump, chunk, shovel rocks straight into the hopper without worry about breaking the hopper. This machine is built to LAST. Easily loaded into pickup truck by 1-2 people.
- Portable, convenient handle at the end of rock chute allows for wheel barrel type mobility.
- Affordable, priced almost as low as some high-bankers on the market.
- Made in the USA

## HOW IT WORKS:

- Material is placed into the hopper, where the first spray zone washes the material before it enters the rotating drum. The second spray zone, inside the rotating drum, washes the material as it tumbles. The third spray zone, outside the rotating drum, keeps the drum clean and helps wash the material.
- This unique design ensures the material is washed from multiple angles as the drum rotates, allowing a five gallon bucket of material to be processed in 2-3 minutes.
- As the material is washed and tumbled, the smaller pieces and dirt fall through the drum's heavy steel screen into the funnel assembly. From there they are directed into the top end of the sluice where the gold is separated.
- The larger material still in the rotating drum, is tumbled and washed for the entire length of the drum and dropped out the end onto the rock chute.
